

CAREERS / METROLOGY AND QUALITY

CMM Programmer

Program and operate DEA Hexagon coordinate measuring machines, perform dimensional checks and support first-off part release.

What you will do

- Create, modify and run measurement programs on DEA Hexagon CMMs using PC-DMIS.
- Perform contact and scanning dimensional measurements on machined components.
- Interpret customer drawings, dimensional requirements and tolerances; evaluate and document measurement results.
- Prepare dimensional reports and support inspection and production release of the first machined parts.
- Work with Production and Quality to analyze results and address dimensional issues.

The profile we are looking for

- Experience independently programming and operating CMMs.
- Working knowledge of PC-DMIS and 3D contact and scanning measurements.
- Ability to read technical drawings and interpret dimensional tolerances.
- Accuracy in documenting results and communicating with Production and Quality.
